Sunday supplements of many newspapers is served from time to time with highly-seasoned half-portions of natural history, stimulative to the imagination perhaps, but not often over full of nutriment in the way of truth or fact. Here is a "rich" sample of ornithology which appeared recently under the authorship of "Dr. W. H. Ballou":

"All migrating water birds, so far as we know, carry safely beneath their feathers little conch shelled animals for food in flight. Without pausing, by a slight twist of the head which shall not upset the centre of gravity, the bird swipes a shell or two when hungry instead of alighting for a table d'hôte dinner. Of all fliers, the upland plover loads itself with the largest number of shells, making probably the longest and most sustained migrations of all water-wading birds."
